

Monthly Immunization Update

July 2025

Dear Schools and partners ,

The purpose of this newsletter is to deliver quick and meaningful updates to support our schools and partners in a variety of vaccine settings, and maintain our connection with all of you. We welcome your questions and comments. Please feel free to share this newsletter with all of your colleagues. Thank you !

World Hepatitis Day

World Hepatitis Day, 28 July, raises awareness of viral hepatitis, an inflammation of the liver that causes severe liver disease and cancer.

There are 5 main strains of the hepatitis virus – A, B, C, D, and E. Together, hepatitis B and C are the most common infections and result in 1.3 million deaths and 2.2 million new infections per year.

Despite better tools for diagnosis and treatment, and decreasing product prices, testing and treatment coverage rates have stalled. But, reaching the WHO elimination goal by 2030 should still be achievable, if swift action is taken now. [Home - World Hepatitis Day](#)

UV Safety Awareness Month

July is recognized as UV Safety Awareness Month. This month serves as a reminder to be mindful of the harmful effects of UV radiation from the sun and take necessary precautions to protect ourselves. Sunburn, skin cancer, and other health problems can be caused by excessive UV exposure, especially during the summer months when the sun's rays are strongest. [UV Safety Awareness Month \(7/2024\) – District Health Department 10](#)

It is important to limit your exposure by taking the following actions:

- Staying in the **shade**, especially during 10AM – 4PM.
- Protecting your skin with **clothing** that covers your arms and legs.
- Wearing a **hat** to protect your head, face, and neck.
- Wearing **sunglasses** that block UV rays to protect your eyes and the skin around them.
